

January 4, 2012

To Our Customers:

Cascade Steel Rolling Mills, Inc. manufactures carbon steel and high strength low alloy steels in various product forms such as concrete reinforcing bar, merchant bar, and wire rod. These materials are produced from 95.5% recycled steel scrap and 4.5% additives. 97% of our scrap is derived from post-consumer sources. Based on April-September 2011 data, 62% of the scrap we use is secured from locations within 500 miles of McMinnville, OR.

The steel products are manufactured by melting in an electric arc furnace, continuous-casting into billets, and hot-rolling to finished size. All of the above manufacturing processes are performed at our plant in McMinnville, OR.

A handwritten signature in black ink that reads 'Thomas E. Murphy'.
